/cgn2_6/ptodata/2/pna/US6/ /cgn2_6/ptodata/2/pna/US6/	

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Construction: Helix Research Institute (HRI); (supported by Japan Key Technology Center etc.); 5'- 6 3'-end one pass sequencing:
Key Technology Center etc.); 5'- 6 3'-end one pass sequencing:
Evaluation; clone selection for full insert sequencing: RAB,
Evaluation: HRI and RAB.

Submitted (04-cor-2000) Sanger Centre, Hinxton, Cambridgeshire,
CB10 15A, UK. F-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk

On Mar 12, 1998 this sequence version replaced gi:2578090.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence has been finished according to sequencing problems,
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HS340N1 135571 bp DNA linear PRI 05-0CT-2000 Human DNA sequence from clone RP3-340N1 on chromosome 1p35-36.2 Contains the 3' part of a gene for a novel phospholipase similar to mouse phospholipase A2 group IIF (PLA2G2F), complete sequence. 298257

On Aug 14, 2000 this sequence version replaced gl:9714699.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

98743 bp DNA linear PRI 25-OCT-200
Human DNA sequence from clone RPI-169023 on chromosome 1 Contains
ESTS, STSs and GSSs. Contains the PLA2GS gene for two isoforms of
phospholiapse A2 group V, a novel gene, the PLASGSD gene for
phospholiapse ginnilar to mouse phospholipase A2 group ID and the 5' part of the gene for
phospholiapse similar to mouse phospholipase A2 group IIF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

INPORTANT: This sequence is not the entire insert of clone RPI-169023 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RPI-169023 is at 1 in this sequence. The true left end of clone RPI-169023 is at 1 in this sequence. It location/Qualifiers

                                                                                                                                                                                                                                                                         http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                  http://www.sanger.ac.uk/HGP/Chrl
RP1-169023 is from the library RPCI-1 constructed at the Roswell
Bark Cancer Institute by the group of Pieter de Jong. For further

NOTE: This is a 'working draft' sequence. It currently consists of 74 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (13-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 157317)
